

Prism

404 NotFound

Introduction

Website that provides you your luxurious needs cheap

An ecommerce website

Website that will make you spend money like crazy

Website that will make you shopalcoholic

Work Performed

Everyone worked on different pages to make a fully functional website.

Front-end development: complete

Backend-development: complete

Combining all the code together: complete

Code Review

Demo

What went well

- We were able to meet frequently
- Our communication benefited us as a group when it came to completing certain tasks and milestones
- Having functionality in both the front and back end of our site
- Gained knowledge by working with group members with strengths in different areas of the web development process
- Successfully created and designed our own ecommerce site

Challenges

- Putting everything together, when everyone had a prototype of the other pages.
- Figuring out the file structures
- Working with unexpected errors in almost all the pages
- Some technical issues
- Different names of table, had to check everything to change(customers->users)
- duplicate entries while refreshing the page
- reply on comments

Improvements

More time connecting all our works together

Fixing css, footer

Debugging cart page, my account page

Fixing checkout page

Future Work

- Implement a payment gateway to process real payments for actual orders through our site
- Have the ability to reply directly to a comment on a product details page from customer to customer
- Establish a 5 star rating/review system for each product on the product details page
- Have complete search functionality to easily find products
- Debug to ensure the best functionality throughout our entire site

Conclusion

Prism is a shopping website to buy designer clothes and solve luxurious fashion problems.

To develop this website, we started with front-end, front-end and back-end together, and completed the whole website.

Thank you!!

Any Questions??
